## **DETAILED ACTION**

### **Continued Examination Under 37 CFR 1.114**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/8/04 has been entered.

### **Claim Rejections - 35 USC § 112**

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-52 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 15, recites "similar operation". However, such limitation renders the claim vague and indefinite since the boundaries are not defined. In other words,

Art Unit: 2631

it is unclear as to what "similar operation" are included or excluded . The same comment applies to any other claims that

includes similar limitation and to any dependent claims depending on a rejected base

claim.

In addition, the limitation "may depend" in claim 35, line 14, claim 41, line 13

and claim 47, line 12, render the claim vague and indefinite.

### **Claim Rejections - 35 USC § 102**

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C.

102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or

Art Unit: 2631

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 35, 41 and 47 are rejected under 35 U.S.C. 102(b) as being anticipated by Razzell US Patent No. 5,805,017.

Razzell discloses a method and apparatus a method and apparatus fig. 4 having the steps of providing a signal including a carrier component and a data component see abstract; where Razzell teaches the reception of an FSK modulated signal, (an FSK signal includes both a data signal and a carrier frequency), performing an acquisition of the signal see fig. 4 the acquisition including the substep of data wipeoff involving a multiplying of the signal using multiplier 12; the step of data wipe-off is followed by a sub step of filtering (16 and 20)(coherent processing) the filtering (16 and 20) (coherent processing) including a process in which consecutive signal points are summed in summer 20 after being multiplied by a weight coefficients in filter 16 that inherently depend on frequency, the signal is inherently acquired to a finer resolution than would be without performing data wipeoff of the data component.

5. Claims 35, 41 and 47 are rejected under 35 U.S.C. 102(e) as being anticipated by Murai et al US Patent No. 6,154,487.

Art Unit: 2631

by Murai et al discloses a method and apparatus a method and apparatus fig. 6 having the steps of providing a signal including a carrier component and a data component see summary section; performing an acquisition of the signal see fig. 8 the acquisition including the substep of data wipeoff involving the squaring of the signal using squarer sets 50; the step of data wipe-off is followed by a sub step of integrating (52)(coherent processing); the squaring (50) (coherent processing) including a process in which consecutive signal points are summed in summer 52 after being multiplied by a weight coefficients 52C 16 that inherently depend on frequency, the signal is inherently acquired to a finer resolution than would be without performing data wipeoff of the data component.

### **Allowable Subject Matter**

6. Claims 1-34 are allowed over the prior art of record.
7. Claims 36-40, 42-46 and 48-52 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Conclusion
